ADDEX

Addex is an asphalt binder additive which can reduce the asphalt cost and usage. One of the positive aspects of this modifier powder is to make a low viscose asphalt binder in mixing temperatures so Addex can replace ordinary additives.

Addex application:

Addex should substitute asphalt binder in 15% and because of this reduction the asphalt mixture production cost will be decreased. Addex is added in asphalt binder for increasing the asphalt mechanical properties besides decreasing production costs.

Addex benefits:

- Increasing the asphalt groove resistance and thermal cracking strength
- Enhancing the asphalt fatigue strength and plastic deformation strength
- Decreasing the production cost because of the having lower price than asphalt binder
- Increasing the pavement durability
- Enhancing the asphalt binder adhesion to the asphalt materials
- Improving the hardness modulus and the possibility of applying thin payments
- Declining the asphalt thermal sensitivity
- Decreasing the environmental damages due to the less energy usage and raw materials.
